DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I in the reply filed on 05 May 2007 is acknowledged. The traversal is on the ground(s) that it would not be a burden on the examiner to search the additional claims to multiple inventions. Upon further consideration, this is found persuasive and the restriction requirement has been withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8, 10, 20 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Kapralis et al. (4,580,547).

Kapralis et al. disclose a heat pack 10 comprising a non-removably attached outermost base sheet, e.g. 15, formed of water resistant plastic material (see Figs. 1 and 3 and col. 2, line 34). The sheet includes a plurality of heating parts 41-44. The heat pack is capable of functioning as a "hair warmer." It is further noted that the device appears to "wrap," i.e. cover, a portion of the head above the forehead and beyond an average hairline (see Fig. 3). The plastic walls are considered to be a "synthetic resin."

Allowable Subject Matter

Claims 1-7, 9 and 11-19 are allowable over the prior art of record.

Response to Arguments

Applicant's arguments filed 18 January 2007, with respect to the outstanding rejection of claims 8, 10, 20 and 21 have been fully considered but are not persuasive.

Whether the contents can escape, e.g. by evaporation, is a different question than whether gas outside of the device can enter, and the latter pertains to what is claimed. The claims recite gas permeability "such that the heating element is exposed to outside air". First, it is noted that just because liquids inside the device cannot escape, or even the liquids in a vapor form cannot escape, does not amount to a teaching against gas permeability and many gas molecules are of widely varying sizes. Thus, the device is permeable to any gas that has a molecular structure smaller than the interstices in the material. It is also noted that the limitation "such that the heating element is exposed to outside air" or "exposing a heat generating material to air through a gas-permeable sheet" can be satisfied in terms of heat transfer (for example, exposure to warm outside air will warm the heating element).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
